The Agricultural Land Use Inventory (ALUI) System employs a "windshield" survey method which captures data visible from publicly accessible lands and roads. Where visibility is limited, data may have been interpreted from aerial photography, in combination with local knowledge. This data represents a snapshot in time of land cover and land use on legal parcels. Legal parcel descriptions, land use and land cover may have changed since the dataset was collected. Using this data to extrapolate farm management practices or environmental impacts from individual parcels is invalid. Please refer to the 2014 Lac La Hache Agricultural Land Use Inventory for more information on data limitations (<http://www2.gov.bc.ca/gov/top/bc/page/EEF38F0026F438E8740F05D13C3C6c>).
